VIA EMAIL

The Honorable Don Beyer  
U.S. House of Representatives  
1119 Longworth House Office Building  
Washington, DC 20515

Re: Nuclear Powers America Act (H.R. 2314/ S. 1134)

Dear Congressman Beyer:

On behalf of the 775,000 active and retired members of the International Brotherhood of Electrical Workers (IBEW), I am writing to urge you to co-sponsor the Nuclear Powers America Act (H.R. 2314 / S. 1134). This bipartisan, bi-cameral legislation would provide existing nuclear power plants with an investment tax credit and is modeled after tax credits for other forms of clean energy.

The Nuclear Powers America Act (NPAA) provides existing nuclear power plants with an investment tax credit. A bipartisan group of U.S. Senators and Representatives, including Senators Kevin Cramer (R-ND) and Ben Cardin (D-MD) and Representatives Darin LaHood (R-IL) and Cheri Bustos (D-IL), introduced S. 1134 and H.R. 2314 in April 2019. There are currently 31 co-sponsors in the House and one in the Senate.

Nationally, there are 97 reactors operating today. An S&P Global Market Intelligence report earlier this year found half of those reactors are economically challenged and could be closed prematurely. Since 2013 eight nuclear plants have closed nationwide. If Congress doesn’t act quickly, another 10 reactors representing approximately 10,000 megawatts will close prematurely. These potential closures will make meeting the nation’s clean energy goals that much more expensive and difficult. Virtually all the experts agree that keeping the existing reactors operating until the end of their license is necessary if there is any chance of meeting the country’s clean air goals.

Nuclear energy is the country’s single largest source of emissions-free energy. While nuclear power represents 20% of the country’s electric generation, it accounts for 55% of all clean energy produced in the United States.

One nuclear plant can power the lives of millions of people, regardless of weather conditions, while providing high-paying jobs to thousands of Americans. Today, nuclear energy is the only source of generation that can reliably produce mass amounts of clean energy 24/7, 365 days a year.

The nuclear industry supports 475,000 jobs in the United States, more than any other segment of the power generation sector, also adds $60 billion to the...
country’s gross domestic product. The commercial nuclear industry also contributes more than $10 billion in federal and $2.2 billion in state taxes each year.

Most of these plants are the economic core of rural American communities. Each plant employs between 400 and 700 Americans at wages that are an average of 36 percent higher than the prevailing local salary rate. On average, each plant contributes $40 million in annual payroll and $470 million in revenue from buying local goods and services. They also provide much-needed funding for local community services like schools, roads, and law enforcement.

Nuclear power is the most reliable source of electric generation in the country, operating 92% of the time. The nuclear power industry provides thousands of IBEW members with good paying jobs and represents the lifeblood of many communities. Such facilities contribute to the country’s clean air goals and are essential for electricity reliability and grid resiliency.

For these reasons, the IBEW strongly supports the Nuclear Powers America Act and asks that you co-sponsor this vital job creating legislation.

Sincerely yours,

Lonnie R. Stephenson
International President

These potential closures will make meeting the nation’s clean energy goals that much more expensive and difficult. Virtually all the experts agree that keeping the existing reactors operating until the end of their license is necessary if there is any chance of meeting the country’s clean air goals.

Nuclear energy is the country’s single largest source of emissions-free energy. While nuclear power represents 20% of the country’s electric generation, it accounts for 55% of all clean energy produced in the United States.

One nuclear plant can power the lives of millions of people, regardless of weather conditions, while providing high-paying jobs to thousands of Americans. Today, nuclear energy is the only source of generation that can reliably produce mass amounts of clean energy 24/7, 365 days a year.

The nuclear industry supports 475,000 jobs in the United States, more than any other segment of the power generation sector, also adds $60 billion to the
country’s gross domestic product. The commercial nuclear industry also contributes more than $10 billion in federal and $2.2 billion in state taxes each year.

Most of these plants are the economic core of rural American communities. Each plant employs between 400 and 700 Americans at wages that are an average of 36 percent higher than the prevailing local salary rate. On average, each plant contributes $40 million in annual payroll and $470 million in revenue from buying local goods and services. They also provide much-needed funding for local community services like schools, roads, and law enforcement.

Nuclear power is the most reliable source of electric generation in the country, operating 92% of the time. The nuclear power industry provides thousands of IBEW members with good paying jobs and represents the lifeblood of many communities. Such facilities contribute to the country’s clean air goals and are essential for electricity reliability and grid resiliency.

For these reasons, the IBEW strongly supports the Nuclear Powers America Act and asks that you co-sponsor this vital job creating legislation.

Sincerely yours,

Lonnie R. Stephenson
International President

The Honorable Elijah Cummings
U.S. House of Representatives
2163 Rayburn House Office Building
Washington, DC 20515

Re: Nuclear Powers America Act (H.R. 2314/ S. 1134)

Dear Congressman Cummings:

On behalf of the 775,000 active and retired members of the International Brotherhood of Electrical Workers (IBEW), I am writing to urge you to co-sponsor the Nuclear Powers America Act (H.R. 2314 / S. 1134). This bipartisan, bi-cameral legislation would provide existing nuclear power plants with an investment tax credit and is modeled after tax credits for other forms of clean energy.

The Nuclear Powers America Act (NPAA) provides existing nuclear power plants with an investment tax credit. A bipartisan group of U.S. Senators and Representatives, including Senators Kevin Cramer (R-ND) and Ben Cardin (D-MD) and Representatives Darin LaHood (R-IL) and Cheri Bustos (D-IL), introduced S. 1134 and H.R. 2314 in April 2019. There are currently 31 co-sponsors in the House and one in the Senate.

Nationally, there are 97 reactors operating today. An S&P Global Market Intelligence report earlier this year found half of those reactors are economically challenged and could be closed prematurely. Since 2013 eight nuclear plants have closed nationwide. If Congress doesn’t act quickly, another 10 reactors representing approximately 10,000 megawatts will close prematurely. These potential closures will make meeting the nation’s clean energy goals that much more expensive and difficult. Virtually all the experts agree that keeping the existing reactors operating until the end of their license is necessary if there is any chance of meeting the country’s clean air goals.

The Honorable Marcy Kaptur
U.S. House of Representatives
2186 Rayburn House Office Building
Washington, DC 20515

Re: Nuclear Powers America Act (H.R. 2314/ S. 1134)

Dear Congresswoman Kaptur:

On behalf of the 775,000 active and retired members of the International Brotherhood of Electrical Workers (IBEW), I am writing to urge you to co-sponsor the Nuclear Powers America Act (H.R. 2314 / S. 1134). This bipartisan, bi-cameral legislation would provide existing nuclear power plants with an investment tax credit and is modeled after tax credits for other forms of clean energy.

The Nuclear Powers America Act (NPAA) provides existing nuclear power plants with an investment tax credit. A bipartisan group of U.S. Senators and Representatives, including Senators Kevin Cramer (R-ND) and Ben Cardin (D-MD) and Representatives Darin LaHood (R-IL) and Cheri Bustos (D-IL), introduced S. 1134 and H.R. 2314 in April 2019. There are currently 31 co-sponsors in the House and one in the Senate.

Nationally, there are 97 reactors operating today. An S&P Global Market Intelligence report earlier this year found half of those reactors are economically challenged and could be closed prematurely. Since 2013 eight nuclear plants have closed nationwide. If Congress doesn’t act quickly, another 10 reactors representing approximately 10,000 megawatts will close prematurely. These potential closures will make meeting the nation’s clean energy goals that much more expensive and difficult. Virtually all the experts agree that keeping the existing reactors operating until the end of their license is necessary if there is any chance of meeting the country’s clean air goals.

Nuclear energy is the country’s single largest source of emissions-free energy. While nuclear power represents 20% of the country’s electric generation, it accounts for 55% of all clean energy produced in the United States.

One nuclear plant can power the lives of millions of people, regardless of weather conditions, while providing high-paying jobs to thousands of Americans. Today, nuclear energy is the only source of generation that can reliably produce mass amounts of clean energy 24/7, 365 days a year.

The nuclear industry supports 475,000 jobs in the United States, more than any other segment of the power generation sector, also adds $60 billion to the
country’s gross domestic product. The commercial nuclear industry also contributes more than $10 billion in federal and $2.2 billion in state taxes each year.

Most of these plants are the economic core of rural American communities. Each plant employs between 400 and 700 Americans at wages that are an average of 36 percent higher than the prevailing local salary rate. On average, each plant contributes $40 million in annual payroll and $470 million in revenue from buying local goods and services. They also provide much-needed funding for local community services like schools, roads, and law enforcement.

Nuclear power is the most reliable source of electric generation in the country, operating 92% of the time. The nuclear power industry provides thousands of IBEW members with good paying jobs and represents the lifeblood of many communities. Such facilities contribute to the country’s clean air goals and are essential for electricity reliability and grid resiliency.

For these reasons, the IBEW strongly supports the Nuclear Powers America Act and asks that you co-sponsor this vital job creating legislation.

Sincerely yours,

Lonnie R. Stephenson
International President

Virtually all the experts agree that keeping the existing reactors operating until the end of their license is necessary if there is any chance of meeting the country’s clean air goals.

Nuclear energy is the country’s single largest source of emissions-free energy. While nuclear power represents 20% of the country’s electric generation, it accounts for 55% of all clean energy produced in the United States.

One nuclear plant can power the lives of millions of people, regardless of weather conditions, while providing high-paying jobs to thousands of Americans. Today, nuclear energy is the only source of generation that can reliably produce mass amounts of clean energy 24/7, 365 days a year.

The nuclear industry supports 475,000 jobs in the United States, more than any other segment of the power generation sector, also adds $60 billion to the
country’s gross domestic product. The commercial nuclear industry also contributes more than $10 billion in federal and $2.2 billion in state taxes each year.

Most of these plants are the economic core of rural American communities. Each plant employs between 400 and 700 Americans at wages that are an average of 36 percent higher than the prevailing local salary rate. On average, each plant contributes $40 million in annual payroll and $470 million in revenue from buying local goods and services. They also provide much-needed funding for local community services like schools, roads, and law enforcement.

Nuclear power is the most reliable source of electric generation in the country, operating 92% of the time. The nuclear power industry provides thousands of IBEW members with good paying jobs and represents the lifeblood of many communities. Such facilities contribute to the country’s clean air goals and are essential for electricity reliability and grid resiliency.

For these reasons, the IBEW strongly supports the Nuclear Powers America Act and asks that you co-sponsor this vital job creating legislation.

Sincerely yours,

Lonnie R. Stephenson
International President

The Honorable Joseph Morelle
U.S. House of Representatives
1317 Longworth House Office Building
Washington, DC 20515

Re: Nuclear Powers America Act (H.R. 2314/ S. 1134)

Dear Congressman Morelle:

On behalf of the 775,000 active and retired members of the International Brotherhood of Electrical Workers (IBEW), I am writing to urge you to co-sponsor the Nuclear Powers America Act (H.R. 2314 / S. 1134). This bipartisan, bi-cameral legislation would provide existing nuclear power plants with an investment tax credit and is modeled after tax credits for other forms of clean energy.

The Nuclear Powers America Act (NPAA) provides existing nuclear power plants with an investment tax credit. A bipartisan group of U.S. Senators and Representatives, including Senators Kevin Cramer (R-ND) and Ben Cardin (D-MD) and Representatives Darin LaHood (R-IL) and Cheri Bustos (D-IL), introduced S. 1134 and H.R. 2314 in April 2019. There are currently 31 co-sponsors in the House and one in the Senate.

Nationally, there are 97 reactors operating today. An S&P Global Market Intelligence report earlier this year found half of those reactors are economically challenged and could be closed prematurely. Since 2013 eight nuclear plants have closed nationwide. If Congress doesn’t act quickly, another 10 reactors representing approximately 10,000 megawatts will close prematurely. These potential closures will make meeting the nation’s clean energy goals that much more expensive and difficult. Virtually all the experts agree that keeping the existing reactors operating until the end of their license is necessary if there is any chance of meeting the country’s clean air goals.

Washington, DC 20515

Re: Nuclear Powers America Act (H.R. 2314/ S. 1134)

Dear Congressman Scott:

On behalf of the 775,000 active and retired members of the International Brotherhood of Electrical Workers (IBEW), I am writing to urge you to co-sponsor the Nuclear Powers America Act (H.R. 2314 / S. 1134). This bipartisan, bi-cameral legislation would provide existing nuclear power plants with an investment tax credit and is modeled after tax credits for other forms of clean energy.

The Nuclear Powers America Act (NPAA) provides existing nuclear power plants with an investment tax credit. A bipartisan group of U.S. Senators and Representatives, including Senators Kevin Cramer (R-ND) and Ben Cardin (D-MD) and Representatives Darin LaHood (R-IL) and Cheri Bustos (D-IL), introduced S. 1134 and H.R. 2314 in April 2019. There are currently 31 co-sponsors in the House and one in the Senate.

Nationally, there are 97 reactors operating today. An S&P Global Market Intelligence report earlier this year found half of those reactors are economically challenged and could be closed prematurely. Since 2013 eight nuclear plants have closed nationwide. If Congress doesn’t act quickly, another 10 reactors representing approximately 10,000 megawatts will close prematurely. These potential closures will make meeting the nation’s clean energy goals that much more expensive and difficult. Virtually all the experts agree that keeping the existing reactors operating until the end of their license is necessary if there is any chance of meeting the country’s clean air goals.

Nuclear energy is the country’s single largest source of emissions-free energy. While nuclear power represents 20% of the country’s electric generation, it accounts for 55% of all clean energy produced in the United States.

One nuclear plant can power the lives of millions of people, regardless of weather conditions, while providing high-paying jobs to thousands of Americans. Today, nuclear energy is the only source of generation that can reliably produce mass amounts of clean energy 24/7, 365 days a year.

The nuclear industry supports 475,000 jobs in the United States, more than any other segment of the power generation sector, also adds $60 billion to the...
country’s gross domestic product. The commercial nuclear industry also contributes more than $10 billion in federal and $2.2 billion in state taxes each year.

Most of these plants are the economic core of rural American communities. Each plant employs between 400 and 700 Americans at wages that are an average of 36 percent higher than the prevailing local salary rate. On average, each plant contributes $40 million in annual payroll and $470 million in revenue from buying local goods and services. They also provide much-needed funding for local community services like schools, roads, and law enforcement.

Nuclear power is the most reliable source of electric generation in the country, operating 92% of the time. The nuclear power industry provides thousands of IBEW members with good paying jobs and represents the lifeblood of many communities. Such facilities contribute to the country’s clean air goals and are essential for electricity reliability and grid resiliency.

For these reasons, the IBEW strongly supports the Nuclear Powers America Act and asks that you co-sponsor this vital job creating legislation.

Sincerely yours,

Lonnie R. Stephenson  
International President
